

WHAT IS CLAIMED IS:

1. A fluid container comprising:
a vessel capable of holding a fluid;
a marker element; and
a scale element including a scale configured to indicate a total filling quantity of the fluid;
wherein the marker element and the scale element are adjustable relative to each other so as to enable an adding up of amounts of fluid so as to indicate the total filling quantity of the fluid, the marker element and the scale element being detachably disposed relative to each other by a magnetic force.
2. The fluid container as recited in claim 1 wherein the total filling quantity is larger than a total volume of the vessel.
3. The fluid container as recited in claim 1 wherein:
the scale element includes a rotary element capable of rotating around the vessel;
the marker element is disposed on the vessel; and
the scale element is connected to the vessel by the magnetic force.
4. The fluid container as recited in claim 1 wherein:
the marker element includes a rotary element capable of rotating around the vessel;
the scale element is disposed on the vessel; and
the marker element is connected to the vessel by the magnetic force.
5. The fluid container as recited in claim 3 wherein at least one of the vessel and the rotary element includes a magnet.
6. The fluid container as recited in claim 3 wherein at least one of the vessel and the rotary element includes a magnetic material.
7. The fluid container as recited in claim 4 wherein at least one of the vessel and the rotary element includes a magnet.

8. The fluid container as recited in claim 4 wherein at least one of the vessel and the rotary element includes a magnetic material.
9. The fluid container as recited in claim 1 wherein:
the scale element includes an elastic element capable of clamping onto the vessel; and
the marker element is slidable along the scale element.
10. The fluid container as recited in claim 1 wherein:
the scale element includes a metal strip or sheet affixed to the vessel and having a scale thereon configured to indicate the total filling quantity; and
the marker element includes a magnet.
11. The fluid container as recited in claim 1 wherein:
the scale element includes a magnet strip or sheet affixed to the vessel and having a scale thereon configured to indicate the total filling quantity; and
the marker element includes at least one of a magnetic material and a magnet.
12. The fluid container as recited in claim 1 wherein:
at least one of the scale element and the marker element includes a magnet; and
the magnet is coated by a plastic material.
13. The fluid container as recited in claim 1 wherein at least one of the scale element and the marker element includes an iron backing disc.
14. The fluid container as recited in claim 13 wherein the iron backing disc is coated by a plastic material.
15. The fluid container as recited in claim 1 wherein that the scale element and the marker element include respective profiles adapted to each other.
16. The fluid container as recited in claim 1 wherein the scale element and the marker element are detachably connected with each other and each includes a respective mechanical connection.

17. The fluid container as recited in claim 1 wherein:
the scale element includes a projection; and
the marker element includes a groove configured to receive the projection in a snap-in fashion.
18. The fluid container as recited in claim 1 wherein:
the marker element includes a projection; and
the scale element includes a groove configured to receive the projection in a snap-in fashion.
19. The fluid container as recited in claim 1 wherein the scale element and the marker element are rotatably adjustable relative to each other in a step-by-step fashion.
20. The fluid container as recited in claim 1 wherein the vessel includes a filling scale.
